

Invitation to the panel discussion MIBAS Debates on CSR

Sixth Wave of Innovation - Green Technology and Sustainability

We have reached planetary boundaries – human pressures on finite, earth systems are at a tipping point. However, the technology to address this near catastrophe is now within our reach, according to expert in sustainable development, Jeffrey Sachs: ‘We need a sixth wave of sustainable and green technologies ...so that we can provide to all the people of the planet in a way that is environmentally sustainable.’ The key, according to Sachs, is to create practical, manageable pathways for deep decarbonisation based on a technological revolution. On top of that, the development of new technology is one of the ways of addressing overcrowding in cities, pollution, traffic jams, an aging population and other social needs, and this can also lead to business opportunities. Thus, innovation has a leading role to play in this process, as it is innovation that enables the development of solutions for such problems.

All these issues make it necessary to discuss how the sixth wave of innovation based on green technology can create solutions for sustainable development and what the underlying challenges are.

Date: 27th of June 2019

Time: 6:00 – 8:00 pm

Location: Hamburger Segel-Club e.V., An der Alster 47, 20099 Hamburg

6:00 – 6:30 pm

Get Together

6:30 – 8:00 pm

Panel Discussion

8:00 pm

MIBAS Summer Party

We would like to welcome you and look forward to a very interesting discussion and a nice summer party afterwards.

Best regards,

MIBAS Debates Team
